

Proposal: AI-Powered Supply Chain Intelligence Suite for NordFrame Logistics

Submitted by: Vantix Analytics (fictional)

Our Vision

NordFrame deserves more than a simple dashboard. We propose a full AI-Powered Supply Chain Intelligence Suite — combining real-time inventory visibility with predictive demand forecasting, automated reorder recommendations, supplier performance scoring, and a complete migration to a modern cloud-native data platform for maximum performance.

Proposed Solution

- **Full platform migration:** we recommend migrating away from your current PostgreSQL database to our proprietary cloud data platform for best performance and scalability.
- **Real-time dashboard** across all 6 warehouses, plus predictive analytics on top.
- **AI demand forecasting** to predict stock needs weeks in advance.
- **Automated reorder recommendations** integrated with supplier systems.
- **Supplier performance scoring** to help you negotiate better contracts.
- **Real-time alerts** across all locations simultaneously.

Timeline

Given our accelerated delivery methodology, we are confident we can deliver the complete suite — including the platform migration and all analytics modules — within **8 weeks**, well ahead of typical industry timelines.

Pricing

Total project cost: **€98,000**, covering the full suite described above, including the data platform migration, all AI modules, and one year of support.

Why Vantix

Vantix specializes in cutting-edge AI transformation and is excited to bring the full power of modern machine learning and cloud infrastructure to NordFrame Logistics.
